COLOUR WHEEL

A map showing the relationships between colours. Colours that lay directly across from each other are called *complements*, and they create strong contrasts in design. Adjacent colours are called *analogous colours*, and they create a smooth, uniform palette.

FIGURE & GROUND

It is a common & important visual effect in design to have a shape that appears to be in the foreground or background. This is called *figure & ground*. The design of the shape can be used to create a smooth, uniform palette.
